Office Action Summary

Art Unit: 1761

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a device for cleaning an ear of corn, the corn including at least one of shuck and silk, classified in class 99, subclass 568.
- II. Claims 10-17, drawn to a method for cleaning an ear of corn encased in shuck and silk, classified in class 426, subclass 482.

The inventions are distinct, each from the other because:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method of Group II as claimed can be practiced by another and materially different apparatus, e.g., an apparatus which does not include a platform having a top surface and a bottom surface, a cob cleaner aperture arranged in the platform, a cleaning member extending into the cob cleaner aperture, a cob support aperture arranged in the platform, an elongated support member extending from the bottom surface of the platform, and a cutting tool level extending from the top surface of the platform. Moreover, the apparatus of Group I as claimed can be used to practice another and materially different process, e.g., for use in polishing an elongated bar of

WOOD

Art Unit: 1761

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art requiring separate searches as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
